

DEEP CONNECTIONS

This astonishing network of cables sits deep below the surface of the world's oceans and it's a part of our environment that humans hardly acknowledge. Of the nearly 4.57 Billion world wide web users today, it would be a shock to learn of such a connection, a physical tie to one another from land to land. Another shocking truth is that these cables facilitate the transmission of 99% of all data. If these pieces of information do not astonish you, one may need to grasp the reality of just how much data the world uses today.
